

PVM-2TE series

2.0 – 12.0 μm HgCdTe two-stage thermoelectrically cooled photovoltaic multiple junction detectors

PVM-2TE series features two-stage thermoelectrically cooled IR photovoltaic multiple junction detectors based on sophisticated HgCdTe heterostructures for the best performance and stability. The detectors are optimized for the maximum performance at λ_{opt} . They are especially useful as large active area detectors operating within 2 to 12 μm spectral range. 3° wedged zinc selenide anti-reflection coated (wZnSeAR) window prevents unwanted interference effects.

Spectral response ($T_a = 20^\circ\text{C}$)

Exemplary spectral detectivity, the spectral response of delivered devices may differ.
