Main applications

- Laser cooling
- Aesthetics
- Medical patient cooling
- Electronics and enclosures
- Electric vehicle systems and components
- Laboratory equipment
- Patient cooling
- Military cooling
- Precision instruments
- Data centers, communication systems

Reliable and efficient

technotrans expands and complements its product portfolio with a new range of energy-efficient liquid chiller modules for core cooling. For complete flexibility, these especially compact devices allow end consumers to adapt coolant fittings as needed. Low noise and low vibration contribute to optimal operating conditions for applications in the laser and semiconductor industries, as well as in analytical, medical and laboratory applications.

Customizable configurations

In order to meet your special technical or design requirements, technotrans offers cooling systems constructed according to your specifications. For inquiries, please contact our technical engineers.

²DI water on demand (low conductivity)

³speed-regulated compressor from customer

⁴drawing on demand

⁵ on demand
